

Fall Comparision of Dummies to Humans

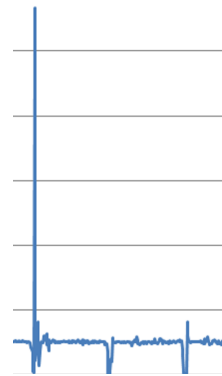

Jacob Hoffman

April 22, 2020

Comparision of Dummy Falls to Human Falls : Because we collected our fall detection data on a dummy, it is important to compare this data to human fall data.

(a) 3 Dummy Falls Recorded 10 seconds apart.

(b) 3 Human Falls Recorded 10 seconds apart.

Observations :

1. The human and dummy falls both have a wide variation in appearances.
2. The human falls and the dummy falls have a very similar visual appearance.
